

## **Linda R. and Charles S. Christine '96 Endowed Sea Turtle Research Scholarship**

**Established in 2024 by Linda and Charles '96 Christine**

Charles Christine '96 holds a bachelor's degree in marine biology from A&M Galveston. He worked in the chemical coatings field for over 30 years, spending the majority of his career in research and development. Linda Christine became a certified nursing assistant through Daytona Beach Community College in 1973 and worked in the nursing industry until her retirement in 1996.

Established with matching funds from the Sherwin - Williams company, where Charles worked as a senior staff chemist until retiring in October 2019, the Christines' scholarship will support both graduate and undergraduate students to develop their innovative ideas through the Gulf Center for Sea Turtle Research. Having experienced the challenges of working through college to stay in school, the Christines' hope this scholarship will ease the burden for other students as they pursue their dreams.
